We provide a large collection of software.The Food and Drug Administration on Thursday urged the public to be aware that the hoarding of baby formula can be a danger to public health. “The agency seeks to remind the public that hoarding can place public health at risk,” the agency said in a statement. Baby formula normally must have four ingredients: glucose, protein, fat and minerals. It is designed to meet the nutritional needs of children. The agency said that some parents hoard baby formula to avoid spending money on formula — an explanation that has been found to be untrue. “Parents should be aware of the dangers of the hoarding of baby formula for their own children or

.Pro.The present invention relates to a recording apparatus which forms a color image using the Carlson process. In a recording apparatus which prints an image corresponding to input image data by electrophotography, multicolor recording is achieved by superposing colored toner images one over the other in a manner such that at least one of the colored toner images is transferred and fixed in the superposed state. The apparatus is called "a multiple-transfer apparatus". An apparatus which forms a color image by superposing toner images one over the other (to be referred to as "a multiple-transfer apparatus") and which is provided with a plurality of photoconductors in order to obtain a desired multiple color image without causing color mis-registration is known. An apparatus which forms a color image by superposing toner images one over the other and sequentially transfers the toner images on a support as the toner images are formed has been known as a color image-forming device using the Carlson process. As the carrier of the toner image on the support which is transferred, a carrier having a surface conductivity opposite to that of the toner image has been used.

The majority of the carriers for this application have been manufactured by dispersing fine conductive particles such as carbon black into a resin binder. However, since the conductive particles such as carbon black have great elasticity, they are liable to aggregate. When they aggregate, the chargeability of the carrier is seriously lowered, and the discharge ability is deteriorated. In the case where an electric field is applied to a carrier with a small conductivity such as a magnetic carrier having a surface conductivity, toner images having a thickness to which electric fields of the same strength are applied are dispersed in the carrier. Therefore, the toner images may be electrically charged, and the transferability of the toner images is lowered. An alternative carrier may be used for toner image carriers. For instance, an insulating carrier with a specific resistivity of  $10 \times 10^{10}$  to  $10 \times 10^{15}$  OMEGA.cm, and a carrier material having a specific resistivity of  $10 \times 10^4$  to  $10 \times 10^{10}$  OMEGA.cm, are known. In an attempt to provide a multiple-transfer apparatus which forms a multiple color image by using the above-described insulating carriers, the development and fixing of each toner image are effected. Therefore, the image quality of a color image may be deteriorated, d0c515b9f4
